

SKY Perfect JSAT Corporation

# Space for your Smile

Toward a world where  
uncertainty turns to peace of mind  
difficulty turns to ease,  
and interest turns to passion

## HISTORY

Since its foundation in 1985 following the deregulation of the telecommunications sector, we have created new businesses and services as a pioneer in satellite communications and digital multichannel broadcasting.

Subsequently, through the merger of SKY Perfect Communications Inc. and JSAT Corporation in 2007 followed by the acquisition of Space Communications Corporation in 2008, SKY Perfect JSAT Group has become one of the largest providers of multichannel pay TV broadcast services in Japan, operating the largest satellite communications business in Asia.

## BUSINESS

Through our Space Business, we are playing an important role in the social infrastructure that supports people's comfort and peace of mind, including provision of societal security against threats such as natural disasters, contribution to Japan's national security, and provision of in-flight and on-vessel internet connections, where needs are increasing. However, we also recognize that the market will not expand through existing satellite communication services alone. By working together with partners armed with cutting-edge technology and fresh ideas inside and outside Japan, it is necessary to improve the operating rate of our communication satellite infrastructure and to provide services that offer new value. In addition, as a new business area, we will provide new services such as information analysis and real-time satellite image distribution services that combine the use of communication satellites with, for example, drones, future stratospheric platforms., optical communication and other cutting-edge technologies.

## Space for your Smile

Toward a world where  
uncertainty turns to peace of mind,  
difficulty turns to ease,  
and interest turns to passion.

# PRODUCT/SERVICE

**Space Intelligence Service**  
Big data available from sea, land, sky and outer space gives us huge insight. For your brighter business tomorrow, we can support your decision-making meaningful one.

**Geo Stationary Satellite Communication**  
We operate 19 satellites in orbit and provide variety of communication services.

**KMOMY / KUMOLOG**  
AI based cloud identification available for your smartphone. We originally developed KMOMY for maritime weather observations advocated by World Meteorological Organization of UN. This observation system is also expected to contribute to global warming countermeasures.

**Lunar Communication**  
Communication with Lunar and CIS-Lunar sphere is under study and research.

**Quantum Key Distribution**  
Unbreakable encryption key delivery is under research and development.

**Space Debris Removal**  
A brand new Orbital Debris Removal method is under research and development.
